

METHOD AND PROGRAM PRODUCT FOR STRUCTURED COMMENT ASSISTS IN
COMPUTER PROGRAMMING

Abstract of the disclosure

- 5 A method for creating and using program comment fields in a
program listing to augment the functionality of a program
language architecture. Standard comment fields are uniquely
identified to contain special augmenting commands. These
commands are used by program editors to augment the program
10 functions. A help notification mechanism is provided to
automatically provide appropriate comment field hints to the
programmer.
